

COVID-19 | Crisis Management Portal - Deployment Guides

Your organisation, like many others, is facing dramatic workforce changes: staff working from home and possibly getting sick and contagious.

Our Crisis Management solution on Jira Service Desk enables status tracking and communication for remote employees. They login on a portal, send their health status, ask questions and management can assess the situation and build their contingency plan using consolidated views.

Download the solution from the Atlassian Marketplace [here](#) and you'll be up and running in a matter of minutes. Please see below for the user guide for your respective deployment option.

We hope that you find our initiative useful to help you navigate the current situation.

Stay safe,

The Valiantys Team
